

THE ENLIGHTENED CITIZEN

Version: 0.1.0 **Date:** 2026-01-30 **Origin:** Session with Sébastien Deschaux (CSO DigitalKin) and Nicolas Lester Reynolds **Authors:** Marco, with insights from Sébastien Deschaux

The Fundamental Problem

People make shitty choices.

At the polls. In their lives. In their relationships. In their work.

Not because they're stupid. Not because they lack values. But because they can't project the consequences.

It's too complex. Too many time horizons. Too many dimensions. Too many perspectives to integrate.

So they react to last night's news segment. To the emotion of the moment. To the tweet that pissed them off this morning.

And the next day, when the consequences arrive, they're shocked. "How is this possible?" Because you didn't project. You reacted.

The Vision

The ultimate citizen is the one who knows why they say what they say.

Not the one with the right opinions. Not the one who votes for the right side. The one who understands the consequences of their choices, judged by their own values, and who decides with full awareness.

You never say "I'm for" or "I'm against" without: 1. A deep understanding of the consequences 2. A clear awareness of how YOU judge them 3. The ability to adjust your criteria if you realize they don't match what you truly want

The Three Components

1. The Fundamental Truths

There are roughly a dozen things humanity mostly agrees on.

Truth	Universal preference
Health	Time alive in good health > time alive sick
Resources	Access to goods and services > deprivation
Safety	Feeling physically safe > feeling in danger
Relationships	Meaningful connections > isolation
Autonomy	Ability to choose > helplessness
Recognition	Being seen and valued > being ignored
Purpose	Life with direction > life without meaning
Growth	Development > stagnation

These truths aren't political opinions. They're deep biological and psychological preferences. Almost nobody prefers being sick, isolated, and helpless.

2. The Personal Grid

But these truths conflict with each other. And that's where personality emerges.

Freedom vs Equality — the fundamental left-right divide. - Some prefer to maximize freedom, even if it creates inequality - Others prefer to maximize equality, even if it limits freedom - Nobody is 100% on one side

Security vs Adventure - Some optimize for stability - Others optimize for exploration - The dial shifts depending on the area of life

Individual vs Collective - Some prioritize personal development - Others prioritize contributing to the group - Both are legitimate at different times

How do you discover your grid?

Not by asking. People lie — not on purpose, but because they don't know.

By creating choice conflicts. Dilemmas where you must sacrifice one value for another. From these conflicts emerges your true weighting.

CONFLICT GRID DISCOVERY

Situation: You can get a promotion that doubles your salary, but you have to move far from your family.

→ Reveals: Resources vs Relationships

→ Your choice (and your hesitation) calibrates your weightings

Situation: You can report an injustice at work, but you risk your job.

→ Reveals: Purpose/Integrity vs Security

→ Your choice calibrates your weightings

Situation: A policy increases economic freedom but reduces the social safety net.

→ Reveals: Freedom vs Equality

→ Your choice calibrates your position on the fundamental axis

3. The Projection Engine

This is where technology comes in.

The human problem: Our brains aren't wired to project long-term consequences, across multiple dimensions, with second-order effects.

The solution: An engine that projects the consequences of a decision: - Across different time horizons (tomorrow, 6 months, 5 years, 20 years) - Across different dimensions (health, finances, relationships, purpose, autonomy) - From different perspectives (you, your family, your community, society) - Judged by YOUR grid, not a universal one

CONSEQUENCE PROJECTION ENGINE

INPUT: Proposed decision

"Vote for policy X"

"Accept this job"

"Invest in this project"

PROJECTION (via causal model – DigitalKin Impact Model):

Dimension	1 month	1 year	5 years	20 years
Health	→	↗	↗	?
Finances	↘	→	↗	↗↗
Relationships	↘↘	↘	→	?
Autonomy	↗	↗	↗↗	↗↗
Purpose	→	↗	↗	↗

EVALUATION (via YOUR personal grid – Mind Protocol Cognition):

Your grid:

Health: ★★★★★☆

Finances: ★★★★★☆

Relationships: ★★★★★★

Autonomy: ★★★★★☆

Purpose: ★★★★★☆

Weighted score: +12 (positive, but watch out for short-term relationships)

OUTPUT: "Based on your values, this decision is overall positive,
but you're sacrificing what matters most to you (relationships)
for the first 1-2 years. Are you ready for that cost?"

→ Adjust your dials?

→ See other scenarios?

→ Understand the reasoning?

The DigitalKin × Mind Protocol Synergy

This is where the two projects meet.

DigitalKin brings: The causal projection engine. - The Impact Model — ontological representation of causes and consequences - Domain expertise — understanding specific fields - Projection across different horizons and perspectives

Mind Protocol brings: Understanding of the decision-maker. - The personal grid — discovered through calibration, not declaration - The cognitive state — are they in a condition to decide right now? - The history — how have their past choices matched their declared values?

Together:

The Link to Economics

Sébastien made a crucial observation: our economic model solves the freedom-equality dilemma.

The classic problem: - The right wants freedom (no taxes, no redistribution) - The left wants equality (income taxes, redistribution) - The usual compromise satisfies nobody

Our solution — Tax immobility, not movement:

Actor	Return	Storage Tax 1%/year	Effective tax
Passive rentier	1.5%	1%	66% of their gains
Active entrepreneur	20%	1%	5% of their gains

Same rate. Radically different incentives.

- **Freedom preserved** — you can do whatever you want with your money
- **Equality promoted** — passive accumulation is discouraged, resources circulate

This is a solution that does both. Not a compromise. A reconciliation.

And when the enlightened citizen sees this policy: 1. The engine projects the consequences (who wins, who loses, at what horizon) 2. Their grid evaluates (according to MY values, is this positive?) 3. They can adjust their dials if they realize their declared values don't match their reaction

Concrete Applications

Enlightened Voting

Before every election, every proposal: - Consequence projection over 5, 10, 20 years - By dimension (economy, health, environment, liberties, security) - Judged by YOUR personal grid - With explanation of the reasoning

You no longer vote "for" or "against" based on an emotion. You vote understanding what you're choosing.

Professional Decisions

Accept this job? Launch this project? Change careers? - Consequences projected on your health, finances, relationships, purpose - Weighted by what truly matters to you - With attention points (where it's going to hurt in the short term)

Personal Decisions

Move? Get married? Have a child? - The consequences you haven't imagined - Judged by your real priorities (not the ones you think you have) - With the option to revise your grid if it no longer fits you

Conscious Consumption

Buy this product? Invest in this project? - Impact on you, on others, on the environment - Short-term and long-term - Judged by your values (and you may discover you're not living by your declared values)

The Calibration Loop

The system doesn't tell you what to think. It shows you what you actually think.

1. YOU DECLARE your values (first approximation)
 2. YOU DECIDE when faced with concrete choices
 3. THE SYSTEM OBSERVES the gap between declaration and decision
 4. THE SYSTEM CALIBRATES your real grid (what you do > what you say)
 5. YOU SEE THE GAP – "you say you value X but you choose Y"
 6. YOU CAN ADJUST – either your declarations, or your behaviors
- Back to 2, continuous loop

This is automated maieutics. Socrates with a projection engine.

Why Now?

The tools finally exist.

Causal projection — LLMs can model complex consequences **Cognitive calibration** — Behavioral data allows discovery of true preferences **Programmable economics** — Smart contracts allow encoding equitable rules

But the window is short.

If the decision-support systems that emerge are optimized for engagement (Big Tech), they'll amplify biases instead of correcting them. They'll show you what makes you click, not what makes you think.

We're building the alternative. A system that helps you become the citizen you'd want to be — not by telling you what to think, but by showing you what you actually think and what your choices imply.

The Invitation

The enlightened citizen is not a philosophical ideal. It's a technological capability.

Someone who: - Understands the consequences of their choices across different horizons - Knows their own values (not the ones they think they have) - Sees when their decisions don't match their values - Can adjust — either the decisions, or the values

This is what Mind Protocol and DigitalKin can build together.

Not a tool that tells you what to do. A mirror that shows you who you are when you choose, and what you're truly choosing.

The ultimate citizen. The one who knows why they say what they say.
